DETAILED ACTION

Claim Objections

1. Claim 1 is objected to because of the following informalities: Appropriate correction is required.

Regarding claim 1, line 8, insert --said—before the term “generating”.

Claim Rejections - 35 USC § 112

2. Claims 1-13, 14, 15, 16-20, 21 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claim 1, line 3, the term “at least one-bit steam” is not clear that it refers to the first or second bit-stream.

Regarding claim 14, line 3, the term “at least one-bit steam” is not clear that it refers to the first or second bit-stream.

Regarding claim 16, line 4, the term “at least one-bit steam” is not clear that it refers to the first or second bit-stream.

Regarding claim 21, line 5, the term “at least one-bit steam” is not clear that it refers to the first or second bit-stream.

Claims 2-13, 15, 17-20, 21 are rejected by virtue of their dependency.

Allowable Subject Matter

3. Claims 22-27 are allowed.

Art Unit: 2611

4. Claims 1, 14, 15, 16, 21 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

5. Claims 2-13, 17-20 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter:

none the prior art of the record discloses or suggests that a method and receiving a digital signal comprising: generating a dequantized digital signal from at least parts of one of the transmitted at least first and second bit streams; wherein generating comprises combining the parts of the at least first and second bit streams, the combined dequantized signal being generated by embedded dequantization in which having at least two quantization levels and at least one quantization interval, at each quantization level, are provided, and wherein the at least one quantization interval shorter than quantization intervals for dequantizing any of the at least first and second bit-streams. Dequantizer configured to generate a dequantized digital signal from the received first and second bit-streams, wherein the dequantizer is further configured to combine, in the generation of the dequantized digital signal, the at least first and second bit-streams, the combined dequantized signal being generated by embedded dequantization in which at least two quantization levels and at least one quantization interval, at each quantization level, are provided, and wherein the at least one quantization interval is shorter than quantization intervals for dequantizing any of the at least first and second bit-streams.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Zhang et al (U.S. Pat. 6,611,624) disclose a system and method for frame accurate splicing of compresses bitstreams.
